Student cohorts covered by specification		2020-21 entry	
Date of introduction of programme		October 19	
Date of programme specification/revision		October 20	

Programme Overview
<p>Studying the BSc Chemistry with Management programme you will be an active participant engaging with a rigorous modern student-centred curriculum in a dynamic and world-leading chemistry department. This degree also allows you to gain paid experience of using chemistry in an industrial context. It is one year longer than its standard counterpart to accommodate the year in industry between your third and final year, while still achieving the same comprehensive chemical content. Ultimately you will contribute to the department's research and to advancing the discipline. Your final year is spent in the Business School, which is triple-accredited by AMBA, EQUIS and AACSB, and you will graduate confident in your ability to take on any challenge in chemistry and beyond.</p> <p>You will develop a thorough and interconnected understanding of core chemistry through studying fundamental chemistry topics across the sub-disciplines of Inorganic, Organic, Physical, Analytical, Synthetic and Computational chemistry. In year 3 you will select from a range of chemistry options to follow your own interests in advanced topics and frontiers of the discipline. Through an extensive laboratory programme you will learn to synthesise chemicals and to study chemical systems through experimental measurements and computational models, including building instrumentation and programming. You will design your own experiments, and thereby learn a range of broader research and transferrable skills from finding reliable information, to designing an experimental investigation, and analysing and communicating the results. Your third year will include an introduction to emergent 'industry 4.0' approaches and technologies such as rapid prototyping, biohacking and machine learning, and you will be matched with an academic supervisor to participate in academic research in the department through a supervised independent research project.</p> <p>In your final year in the Business School the core modules including accounting, entrepreneurship and marketing equip you with an understanding of the management of the operating environment of business organisations, and prepare you for a career in management roles. The balanced programme of formal teaching, case studies and individual and group work is aimed at developing your personal, conceptual and analytical skills, as well giving you the chance to broaden your academic experience and mix with students from other disciplines.</p> <p>Your core chemistry studies will be complemented by your choice of elective ancillary module in years 1 and 2, and the i-Explore module in year 3, in which you undertake multidisciplinary study eg. Physics, Philosophy, Language. Further, extra-curricular, opportunities include access to the Advanced Hack Space and Invention Rooms at White City, initiatives such as the faculty's Make A Difference competition, and summer research projects through the Undergraduate Research Opportunities Programme. Most teaching will be at South Kensington, but travel to the White City campus will be necessary for some activities.</p> <p>You will learn from a range of teachers: peers, postgraduate students, teaching- and research- focussed academic staff up to professorial level, including world leaders in their fields. You will build collaborative learning relationships with a range of people, and a personal tutor will oversee your personal and intellectual development.</p> <p>The degree programme is professionally accredited by the Royal Society of Chemistry, meaning your degree will be recognised around the world as high quality, having academic rigour and meeting the needs of both students</p>

and employers. As well as your main Imperial degree, you will also receive the award of the Associateship of the Royal College of Science (ARCS) on completion of this course. Graduates of the chemistry department go on to a range of employments and further study, including PhD study, technical consultancy, research and development, accountancy, marketing, business activities and medical and law-based graduate training.

Learning Outcomes

Chemistry degree programmes have six broad Intended Learning Outcomes. Students will be able to:

1. **Apply chemistry knowledge and understanding**
2. **Use experimentation to find chemical information and create new chemical knowledge and technologies**
3. **Use reliable sources to find chemical information**
4. **Analyse and interpret data and solve problems creatively in chemistry and wider contexts**
5. **Communicate chemistry**
6. **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world**

and employ the transferrable skills and core competencies expressed in the [Imperial Graduate Attributes](#)

Graduates of the Chemistry with Management programmes will additionally be able to demonstrate knowledge and understanding of:

- The management of innovation in a modern organisation including the implications of technology
- The roles and behaviour of people working in organisations;
- The key issues in contemporary human resource management and an appreciation of the theory and research which underpins these issues
- The strategic decisions faced by the top management team of an organisation
- The responsibility of business within a framework of sustainability, ethics and corporate governance
- The techniques of financial and managerial accounting and their relevance to the broader issues of management decision-making and control
- A theoretical framework for analysing key financial markets and an understanding of how they interact with the key decisions of firms
- The business and economic environment including the ways in which the government responds and shapes the economic environment and how this can be anticipated
- The key marketing concepts and principles of marketing analysis
- The management problems that are either unique to international business or arise in particular complex or acute forms in business that span national boundaries
- The issues associated with evaluating the viability of new technologies, new products or services in the fields of medicine and science

and those taking a Year in Industry to:

Apply chemistry and transferable skills gained in years 1-3 of the degree programme to work in a commercial industrial setting

Upon completion of a BSc Chemistry degree you will, in addition to the Certificate and Diploma learning outcomes (below), be able to:

- **Apply chemistry knowledge and understanding:**
describe advanced topics and areas of current research; choose appropriate models to provide explanations and predictions within the context of advanced topics or current research applying core chemistry concepts
- **Use experimentation to find chemical information and create new chemical knowledge and technologies:**
plan and carry out investigative work and an open-ended research project, demonstrating an integrated understanding of techniques for synthesis, analysis and/or computational modelling

- **Use reliable sources to find chemical information:**
efficiently find information to explore a specific field of research; summarise information gathered from a range of literature sources
- **Analyse and interpret data and solve problems creatively in chemistry and wider contexts:**
define and solve problems in real-world and abstract contexts using incomplete or ambiguous data sets, applying critical analysis
- **Communicate chemistry:**
communicate their research project context, aims and outcomes; communicate synoptic understanding with and without presentation aids
- **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world:**
employ behaviours of a professional learner; manage their own learning, time and workload and build research group relationships over a project; exercise initiative; operate in a professional environment

Upon completion of a Diploma of Higher Education you will, in addition to the Certificate learning outcomes (below), be able to:

- **Apply chemistry knowledge and understanding:**
choose appropriate representations to describe familiar and unfamiliar chemical systems and processes; explain concepts and theories and apply synoptic understanding; explain and predict properties, behaviours and trends with an appreciation of the limitations of familiar models and their position in the historical development of the discipline
- **Use experimentation to find chemical information and create new chemical knowledge and technologies:**
assess risks and hazards of self-determined lab work; use advanced techniques and basic computational modelling; obtain reliable and accurate and precise data
- **Use reliable sources to find chemical information:**
identify appropriate reliable texts to find information and to extend syllabus learning; extract meaning from journal articles; use reference management software
- **Analyse and interpret data and solve problems creatively in chemistry and wider contexts:**
use their own synoptic knowledge and understanding of theoretical models and the results of information searches, experimental work and data analyses to solve well-defined problems in real-world contexts
- **Communicate chemistry:**
in a mode appropriate to the designated audience
- **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world:**
apply techniques of independent learning; contribute to the education of others within communities of learning

Upon completion of a Certificate of Higher Education you will be able to:

- **Apply chemistry knowledge and understanding:**
use various representations as directed to describe familiar chemical systems and processes; explain concepts; use concepts, theories and models to explain and predict properties, behaviours and trends
- **Use experimentation to find chemical information and create new chemical knowledge and technologies:**
assess risks and hazards of lab work; apply basic techniques to work safely and purposefully in the lab to obtain meaningful data; carry out basic computational operations
- **Use reliable sources to find chemical information:**
use recommended texts to find information and to reinforce syllabus learning; extract with guidance appropriate data from journal articles; correctly cite sources of information
- **Analyse and interpret data and solve problems creatively in chemistry and wider contexts:**
use their own knowledge and understanding of theoretical models, and results of information searches, their own experimental work and data analyses, to solve well-defined problems in familiar contexts
- **Communicate chemistry:**
communicate scientific ideas in accurate English clearly through a variety of defined modes using correct terminology and effective presentation of data

- **Demonstrate intellectual and personal development as a university learner and citizen to enable purposeful and responsible engagement with the world:**
apply techniques of university learning; self-reflect on what has been learned from received teaching; build collaborative learning relationships with peers and tutors and integrate into the university community

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/students/academic-support/graduate-attributes

Entry Requirements

Academic Requirement	<p>The minimum requirements for entry to this degree programme, and <i>typical offers</i>, are listed below:</p> <p>A-Level: AAA in Chemistry, Mathematics, plus a third subject, preferably Biology, Physics or Economics. <i>Typical offer:</i> A*AA-A*A*A. General Studies and Critical Thinking are not accepted.</p> <p>IB: 38 points overall, with HL6 in Chemistry, HL6 in Mathematics plus HL6 in a third subject as above. <i>Typical offer:</i> 39 points, with 7, 6, 6 at Higher Level.</p> <p>For further information on entry requirements, please go to https://www.imperial.ac.uk/study/ug/apply/requirements/ugacademic/</p>
Non-academic Requirements	N/A
English Language Requirement	<p>Higher requirement</p> <p>Please check for other Accepted English Qualifications</p>
Admissions Test/Interview	<p>All applications through UCAS are vetted internally and short-listings are made for interview. There is no discrimination by date of application. Academic interviews are conducted in person by two academic staff or <i>via</i> Skype by one experienced academic staff member. You will be informed of the interview performance criteria in advance. Detailed written interview feedback and grading from interviewers is used, in conjunction with the application, to make an offer decision. There is no admissions test in use.</p> <p>Please see the following webpage for further information: http://www.imperial.ac.uk/chemistry/undergraduate/admissions/application-and-entry-requirements/</p>

The programme's competency standards documents can be found at: <http://www.imperial.ac.uk/chemistry/undergraduate/course-structure-and-content/>

Learning & Teaching Approach

Learning and Teaching Delivery Methods

The teaching and learning approach you will experience aims broadly that you gain an integrated understanding of chemistry and are able to apply this to solve real-world problems, and develop into a self-motivated, independent life-long learner. Teaching will include: lectures and other whole-cohort teaching sessions incorporating active learning (opportunities for you to apply your learning); discussions in tutorials in groups of about 8; supervised small group and individual project work; laboratory practicals in small groups, pairs or individually; placement in an academic research group for an independent research project. Throughout the degree you will undertake independent study and you may choose to work individually or with peers.

Overall Workload

Your overall workload consists of face-to-face sessions and independent learning. While your actual contact hours may vary according to the optional modules you choose to study, the following gives an indication of how

much time you will need to allocate to different activities at each level of the programme. At Imperial, each [ECTS credit](#) taken equates to an expected total study time of 25 hours. Therefore, the expected total study time is 1500 hours per year.

Typically, in years 1 and 2 you will spend in the order of 15% of your time on classroom teaching (around 230 hours), 15% in the laboratory, and 70% on independent study. Week-to-week your workload will fluctuate within reasonable limits, i.e. you will be more busy in some weeks than others. In later years the proportion of independent study increases to 80% in year 3 (excluding the research project). You will spend your fourth year in full-time employment on an industry placement.

Assessment Strategy

Assessment Methods

Your achievement of the intended learning outcomes of the programme will be supported by formative assessment and measured by a range of summative assessments.

Formative assessment opportunities will include digital resources for self-assessment, discussions in tutorials, in workshops and in the laboratory, formative assignment submissions, and, during your final year project, formative literature / interim reports and discussions with your supervisor. Discussions with your personal tutor will address your intellectual and personal development and engagement.

Open- and closed- book examinations and tests will summatively assess your ability to apply chemistry knowledge and understanding, and to analyse and interpret data and solve problems (ILOs 1 and 4). Your performance in the lab will be an assessment also of your ability to use experimentation (ILOs 1,2,4). Oral exams (known as 'vivas') will additionally assess your ability to communicate chemistry (ILOs 1,4,5), and written reports, poster and oral presentations also your ability to find reliable chemical information (ILOs 1,3,4,5). Formal and informal groupwork, reflection on your learning from labs through the research skills passport, and structured self-reflective statements will assess your intellectual and personal development and engagement with the world (ILO 6).

Assessment mode	Year 1	Year 2	Year 3	Year 4	Year 5
Examination	75%	65%	40%*	0%	50%
Coursework / Practical	25%	35%	60%*	100%	50%

* Variable with choice of options

Academic Feedback Policy

You will receive verbal feedback on your understanding and performance through informal discussions with peers, GTAs and staff in labs, workshops and tutorials. You will generally receive immediate verbal feedback on your performance in oral exams and presentations. The department manages submission of written work electronically, and you will receive feedback comments on your work similarly, within 10 working days of submission. Following exams, general feedback on the performance of the cohort is made available, and in early years you will receive individual feedback on your understanding through a scheduled discussion with a tutor, while in later years you can request feedback via your personal tutor.

The College's Policy on Academic Feedback and guidance on issuing provisional marks to students is available at:

www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Re-sit Policy
The College's Policy on Re-sits is available at: www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/
Mitigating Circumstances Policy
The College's Policy on Mitigating Circumstances is available at: www.imperial.ac.uk/student-records-and-data/for-current-students/undergraduate-and-taught-postgraduate/exams-assessments-and-regulations/

Additional Programme Costs		
This section should outline any additional costs relevant to this programme which are not included in students' tuition fees.		
Description	Mandatory/Optional	Approximate cost
Laboratory Personal Protective Equipment (PPE)	Mandatory	PPE is provided at no cost by the department, and replaced as appropriate
Students will need to consider the costs involved with placements. For students studying or working abroad as part of their programme, costs will vary with destination. Information on the types of costs which may be incurred can be found in the Placements Abroad Handbook which is available at https://www.imperial.ac.uk/placements/information-for-imperial-college-students/		

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at the time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.

Programme Structure ¹					
Year 1 – FHEQ Level 4 Students study all core modules. Students choose one elective from group A.					
Code	Module Title	Core/ Elective	Group	Term	Credits
	i-Engage	Core		1-3	0
	Language of Chemistry	Core		1	7.5
	Structure and Bonding: Atomic Structure to Molecular Orbitals	Core		1	10
	Introduction to Spectroscopy	Core		1	5
	Reactivity at Carbon Centres	Core		2	7.5
	The Reactions Toolkit: Thermodynamics and Kinetics	Core		2	5
	Chemistry of the Elements: Hydrogen to Uranium	Core		2	5
	Practical Chemistry 1	Core		1-3	15
	Maths and Physics 1	Elective	A	1-2	5
	Medicinal Chemistry 1	Elective	A	1-2	5
	Horizons	Elective	A	1-2	5
Credit Total					60
Year 2 - FHEQ Level 5 Students study all core modules. Students choose one elective from group A.					
Code	Module Title	Core/ Elective	Group	Term	Credits
	i-Engage 2	Core		1-3	0
	Electronic States and Bonding	Core		1	7.5
	Analysis, Separation and Characterisation	Core		1-2	5
	Solids, Liquids and Interfaces	Core		2-3	7.5
	Chemistry of Molecular Systems	Core		2-3	5
	Macromolecules and Materials	Core		2-3	5
	Molecular Synthesis	Core		1-2	5
	Practical Chemistry 2	Core		1-3	20
	Maths and Physics 2 ²	Elective	A	1-2	5

¹ **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. **Elective** modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.

² Maths and Physics 1 is prerequisite for Maths and Physics 2

	Medicinal Chemistry 2 ³	Elective	A	1-2	5
	Undergraduate Ambassador Scheme	Elective	A	1-2	5
	Horizons	Elective	A	1-2	5
Credit Total					60
Year 3 - FHEQ Level 6					
Students study all core and compulsory modules (there is choice within modules).					
Code	Module Title	Core/ Elective/ Compulsory	Group	Term	Credits
	Advanced Chemistry Topics 1	Core		1	10
	Advanced Chemistry Topics 2	Core		2	15
	Industry 4.0	Core		3	5
	Practical Chemistry 3 for BSc Chemistry	Core		1-3	25
	i-Explore	Compulsory		1-2	5
Credit Total					60
Year 4 - FHEQ Level 6 (Year in Industry)					
Code	Module Title	Core/ Elective	Group	Term	Credits
	Year in Industry	Core			60
Credit Total					60
Year 5 - FHEQ Level 6					
Students study all core modules.					
Code	Module Title	Core/ Elective	Group	Term	Credits
	Induction	Core		1	0
	Accounting Primer	Core		1	0
	Pre-Programme Maths	Core		1	0
	Plagiarism Awareness	Core		1	0
	Study Skills	Core		1	0
	Accounting	Core		1	5
	Business Economics	Core		1	5
	Business Strategy	Core		1	5
	Organisational Behaviour & Human Resource Management	Core		1	5

³ Medicinal Chemistry 1 is prerequisite for Medicinal Chemistry 2

	Global Business Management	Core		1	5
	Marketing	Core		2	5
	Innovation Management	Core		2	5
	Finance and Financial Management	Core		2	5
	Sustainable Business	Core		2	5
	Entrepreneurship	Core		2	5
	Group Project	Core		3	10
				Credit Total	60

Progression and Classification

Progression

In order to progress to the next level of study, you must have passed all modules (equivalent to 60 ECTS) in the current level of study at first attempt, at resit or by a compensated pass.

The overall weighted average for each year must be 40.00%, including where a module(s) has been compensated, in order for you to progress to the next year of the programme.

Failure to pass the Year in Industry will result in transfer to the F1NF BSc Chemistry with Management programme.

Classification

The marks from modules in each year contribute towards the final degree classification.

In order to be considered for an award, you must have achieved the minimum number of credits at the required levels prescribed for that award and met any programme specific requirements as set out in the Programme Specification.

Your classification will be determined through:

- i) Aggregate Module marks for all modules
- ii) Year Weightings

For this award, Year 1 is weighted at 7.50%, Year 2 at 20.00%, Year 3 at 36.25%, Year 4 at 0.00% and Year at 36.25%.

The College sets the class of undergraduate degree that may be awarded as follows:

- | | | |
|------|--------------|---|
| i) | First | 70.00% or above for the average weighted module results |
| ii) | Upper Second | 60.00% or above for the average weighted module results |
| iii) | Lower Second | 50.00% or above for the average weighted module results |
| iv) | Third | 40.00% or above for the average weighted module results |

Imperial College is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of the College's Centenary, 8th July 2007, established the College as a University with the name and style of "The Imperial College of Science, Technology and Medicine".
www.imperial.ac.uk/admin-services/secretariat/college-governance/charters/

Imperial College London is regulated by the Office for Students (OfS)
www.officeforstudents.org.uk/advice-and-guidance/the-register/

This document provides a definitive record of the main features of the programme and the learning outcomes that a typical student may reasonably be expected to achieve and demonstrate if s/he takes full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
